EXPERIENCE

Freelance Software Developer

MAY 2019 - PRESENT

As a Freelance Software Developer, I have been designing and developing modern web applications focusing on user interface design, responsive layouts, and seamless API integration.

Personal Projects

- **ReelRoster – Movie Discovery Web App**
Developed a web application using React and the TMDb API to help users browse and manage movies. Implemented watchlist and favorites toggles, real-time search, and pagination with a responsive UI built using Vite and Tailwind CSS.
- **HabitTap – Mobile Habit Tracker**
Built a habit-tracking app in React Native with Expo, enabling users to log daily habits and track progress over a calendar. Used SQLite for local persistence, custom hooks for habit state, and calendar heatmap visualizations for daily completions.
- **NOMAD – Voice-Controlled Cooking Assistant (Prototype)**
Prototyped a voice-based kitchen assistant for discovering and following recipes hands-free. Explored voice interaction flows, multimodal feedback, and smart appliance control within a future-oriented UX design project.

Frontend Developer – Equity & Engagement Consulting, LLC

- Designed and developed a fully responsive website from the ground up using HTML, CSS, and JavaScript, ensuring cross-browser compatibility and a seamless user experience.
- Outlined design and user experience (UX) strategy, focusing on clean navigation, accessibility compliance (WCAG), and mobile responsiveness to enhance engagement.

Sigma Defense Systems LLC, Remote — Software Engineer II

NOV 2020 - OCT 2024

As a Software Engineer II, I worked on process automation using GitLab pipelines and building operating system containers. I've also built and maintained many React and JavaScript components.

Frontend Developer – Nites-Next

- Developed and maintained React.js features for an internal enterprise application, ensuring scalability and performance.
- Optimized state management using React Hooks and Redux, reducing application latency by 30%.
- Conducted code reviews and debugging sessions to maintain high-quality, maintainable code.
- Upgraded application features to integrate with a new version of Hibernate, improving backend compatibility.
- Updated and maintained developer documentation to streamline onboarding and knowledge transfer.

DevOps Engineer – Black Pearl

- Designed and implemented CI/CD pipelines using GitLab, automating code quality checks, linting, and vulnerability scans.
- Led development of automated security vulnerability detection workflows, reducing false positives by 40%.
- Worked closely with cross-functional teams to ensure pipeline usability and seamless integration.
- Contributed to overall code structure improvements, enhancing maintainability and readability.

DevOps Engineer – Container Hardening Team

- Conducted vulnerability assessments on RedHat-based container images, improving security posture.

EDUCATION

Drexel University,

Philadelphia, PA —

Graduate Certificate, Web Application Development

JAN 2025 - JUN 2026

(Expected)

Drexel University,

Philadelphia, PA — M.S.

Human-Computer

Interaction & User Experience

JAN 2024 - JUN 2026

(Expected)

Hampton University,

Hampton, VA — B.S.

Computer Science

AUG 2014 - MAY 2019

SKILLS

Programming Languages:

Java, Python, JavaScript, Bash, HTML, Go, PHP, YAML, TypeScript

Frameworks:

Angular, React, Node, React Native

Platforms:

Docker, Terraform, Ansible, AWS, Kubernetes

Web Applications:

Git, Figma, Canva, Jira, Confluence, WordPress, SharePoint, Shopify

Databases:

MySQL, MongoDB

Methodologies:

Agile (Scrum), CI/CD, Kanban

- Implemented container optimizations to streamline deployment processes and reduce resource consumption.
- Simplified container structures for improved usability, reducing deployment time by 20%.

Software Engineer - Napoleon/Braavos Team

- Served as **Scrum Master**, managing sprint planning, backlog grooming, and team collaboration.
- Facilitated **cross-team coordination**, ensuring development efforts were aligned with business requirements.
- Designed and implemented **frontend improvements** for enterprise applications using React.js, JavaScript, and TypeScript.
- Collaborated with **backend engineers** to ensure seamless **API integration** and data flow.

DevOps Engineer - Pipelines and Operations

- Developed **schema validation** features to improve data integrity across **multiple environments**.
- Conducted **sanity checks** on large-scale codebases, preventing regressions and maintaining code health.
- Managed team tasking as **Scrum Master**, ensuring smooth execution of **CI/CD pipeline optimizations**.

Lockheed Martin, King of Prussia, PA — Software Engineer Asc

JUL 2019 - NOV 2020

As a Software Engineer Asc, I was exposed to a myriad of projects that challenged and taught me numerous things about myself, both personally and professionally.

Frontend Developer - Space Security Development Team

- Worked on an application designed for military operations regarding threat identification and analysis
- Standardized and maintained visuals of the application
- Constructed unit testing framework for the application
- Created multiple features
 - Added submitting a new “plan” to a database through the application
 - Built a notification center
 - Prioritized notifications based on relevance

DevOps Engineer - Secure Delivery Development Team

- Componentized services for more efficient delivery to internal clients
- Automated testing for componentized services using Ansible
- Facilitated communication between internal teams on the proper use of data transfer scripts
- Automated usage of data transfer scripts to increase efficacy

Software Engineer - SPARTA Development Team

- Developed scripts to increase the effectiveness of data transfers over internal air-gapped networks using Python
- Executed and documented an entire service deployment and configuration using Terraform and Ansible
- Supported restructuring of a GitLab Pipeline to improve a team’s ability to deploy their services

Google Inc, Irvine, CA — Engineering Practicum Intern

MAY 2015 - AUG 2015

As an Engineering Practicum Intern, I worked closely with senior developers to complete tasks and gain knowledge on the development cycle and best practices.

- Utilized Angular Dart, HTML, and CSS to consolidate cookie usage within Google’s internal support application
- Contributed 400+ lines of code to Google’s extensive codebase
- Participated in **daily standups** and **code reviews**, gaining hands-on experience in **Agile development workflows** and learning best practices from experienced engineers.
- Collaborated with **UI/UX designers** to enhance user experience by implementing **responsive layouts** and **accessibility improvements**.
